

# RESTful Java client with Jersey client

By mkyong (<http://www.mkyong.com/author/mkyong/>) | July 19, 2011 | Updated : August 29, 2012 | Viewed : 766,958 times +2,778 pv/w

This tutorial show you how to use **Jersey client APIs** to create a RESTful Java client to perform “GET” and “POST” requests to REST service that created in this “Jersey + Json (<http://www.mkyong.com/webservices/jax-rs/json-example-with-jersey-jackson/>)” example.

## 1. Jersey Client Dependency

To use Jersey client APIs, declares “**jersey-client.jar**” in your `pom.xml` file.

File : `pom.xml`

```
<dependency>
  <groupId>com.sun.jersey</groupId>
  <artifactId>jersey-client</artifactId>
  <version>1.8</version>
</dependency>
```

Build react apps twice as fast with  
UI for React. Try now

Ad The Kendo UI library provides every  
to integrate with React out of the box.

Progress Telerik

[Download](#)

## 2. GET Request

Review last REST service.

```
@Path("/json/metallica")
public class JSONService {

    @GET
    @Path("/get")
    @Produces(MediaType.APPLICATION_JSON)
    public Track getTrackInJSON() {

        Track track = new Track();
        track.setTitle("Enter Sandman");
        track.setSinger("Metallica");

        return track;
    }
    //...
```

Jersey client to send a “GET” request and print out the returned json data.

```

package com.mkyong.client;

import com.sun.jersey.api.client.Client;
import com.sun.jersey.api.client.ClientResponse;
import com.sun.jersey.api.client.WebResource;

public class JerseyClientGet {

    public static void main(String[] args) {
        try {

            Client client = Client.create();

            WebResource webResource = client
                .resource("http://localhost:8080/RESTfulExample/rest/json/metallica/get");

            ClientResponse response = webResource.accept("application/json")
                .get(ClientResponse.class);

            if (response.getStatus() != 200) {
                throw new RuntimeException("Failed : HTTP error code : "
                    + response.getStatus());
            }

            String output = response.getEntity(String.class);

            System.out.println("Output from Server .... \n");
            System.out.println(output);

        } catch (Exception e) {

            e.printStackTrace();

        }
    }
}

```

Output...

```

Output from Server ....

{"singer":"Metallica","title":"Enter Sandman"}

```

### 3. POST Request

Review last REST service.

```

@Path("/json/metallica")
public class JSONService {

    @POST
    @Path("/post")
    @Consumes(MediaType.APPLICATION_JSON)
    public Response createTrackInJSON(Track track) {

        String result = "Track saved : " + track;
        return Response.status(201).entity(result).build();

    }
    //...
}

```

Jersey client to send a "POST" request, with json data and print out the returned output.

```
package com.mkyong.client;

import com.sun.jersey.api.client.Client;
import com.sun.jersey.api.client.ClientResponse;
import com.sun.jersey.api.client.WebResource;

public class JerseyClientPost {

    public static void main(String[] args) {

        try {

            Client client = Client.create();

            WebResource webResource = client
                .resource("http://localhost:8080/RESTfulExample/rest/json/metallica/post");

            String input = "{\"singer\":\"Metallica\",\"title\":\"Fade To Black\"}";

            ClientResponse response = webResource.type("application/json")
                .post(ClientResponse.class, input);

            if (response.getStatus() != 201) {
                throw new RuntimeException("Failed : HTTP error code : "
                    + response.getStatus());
            }

            System.out.println("Output from Server .... \n");
            String output = response.getEntity(String.class);
            System.out.println(output);

        } catch (Exception e) {

            e.printStackTrace();

        }

    }
}
```

Output...

```
Output from Server ....

Track saved : Track [title=Fade To Black, singer=Metallica]
```

How do I add basic authorization to a header? I tried this but it returns error 500:

Client client = Client.create();

WebResource webResource = client.resource("http://url/search");

MultivaluedMapImpl values = new MultivaluedMapImpl();

values.add("max", "2");

values.add("table", "abc");

```
ClientResponse response = webResource.header(HttpHeaders.AUTHORIZATION, "Basic " +
"GVFUCVJFT1BTokJORjXmKZQVJloa1BFYQ==")
```

.accept(MediaType.APPLICATION\_XML)

.type(MediaType.APPLICATION\_FORM\_URLENCODED)

.post(ClientResponse.class, values);

Any thoughts?

Hi, Just wondering how to send a object to a get request?. I need to send a list of many filter parameters which the user selects from UI and get the data back in Response. I can now retrieve data by passing the object in post request but this is wrong way of doing things as what the code actually does is a GET to the server which will retrieve data passing in the list.

JAX-RS TUTORIALS | BUYWORKSELL

(<http://buyworksell.com/2013/11/27/jax-rs-tutorials/>)

[...] RESTful Java client with Jersey client [...]

🕒 4 years 28 days ago

Orrimp

The tutorial may be simple but its defenitely wrong. How can you say it is RESTful when you use something like @Path("/post"). This is clearly RPC-Hybrid. You still thinking in methods not in resources.

Suggestion: @Path("/album").

Please do not post stuff randomly on your blog. (not the first time)

🕒 4 years 3 months ago

Guest

dli7mar@yahoo.com

Hi Mkyong,

how do I assign the data received from service to a data structure on client side, e.g., XML and JSON data into a List of entity class? Will you please give some sample code?

Thanks in advance.

🕒 4 years 5 months ago

Guest

Vinay Kumar

Thank you for your wonderful tutorial.

in POST Request, the status check should be for 200 , 201 was not working for me.

```
if (response.getStatus() != 201) {  
    _____  
}
```

should be

```
if (response.getStatus() != 200) {  
    _____  
}
```

Http status 404

🕒 4 years 6 months ago ^

Guest

Shashank Awasthi

If running on eclipse , make sure that your project is loaded on the server and the server is turned on .

🕒 4 years 4 months ago

Guest

Sushil

Hi Neha,

Did you get any solution ?

I am also facing the same problem.

When I am hitting the browser with URL : "http://localhost:8080/RESTfulExample/rest/json/metallica/get" I am getting a proper result

```
{ "title": "Enter Sandman", "singer": "Metallica" }
```

But when I am trying to run the client code 'RESTfulExample1/src/main/java/com/mkyong/client/JerseyClientGet.java'

I am getting the error

```
=====
java.lang.RuntimeException: Failed : HTTP error code : 404
at com.mkyong.client.JerseyClientGet.main(JerseyClientGet.java:24)
=====
```

anybody please guide me to get a solution its really getting frustrating.

4 years 6 months ago ^
